Academic Year | 2019 | Semester | 1
---|---|---|---
Course Code | HH4022 |  |
Course Title | Colonial combination of Western and folk-based medical practices in Asia – From biological anthropology and medical history perspectives |
Pre-requisites | None |
No of AUs | 4

Course Aims
The aim of the course is to provide students with a general overview of the basic themes and issues in biological anthropology and medical history. In this course, you will also examine how colonial Singapore combined both western and folk medical practices in Singapore. This course will analyze the co-existence of Western tropical medicine and folk immigrant medical practices, the role of missionary nurses and doctors and their relationship to colonial medicine and policy and lastly, the course will study the use of epidemiology in Singapore during the 1918 influenza pandemic.

Intended Learning Outcomes (ILO)
By the end of this course, you (as a student) will be able to:
1. Explain the significance of Chinese medicine is still significant even as Western medical practices still prevailed and how both types of medicine had evolved overtime and shaped today’s health care.
2. Explain about medical services provided by the different ethnic groups—such as the Chinese, Malays, and Indians—during colonial Singapore.
3. Engage in close reading, critical thinking, intensive discussion, and rigorous training in writing and presentation to gain a better understanding of the diverse medical practices development that occurred throughout the time period.

Course Content
The instructor will lecture on biological anthropological topics, while students’ presentation and assignments will be more related to medical history. The teaching of biological anthropology is to let students know more about the field and how it is related to human history and the development of medicine. The second part of the course on medical history covers colonial Western medicine and folk medical practices. By comparing the political, economic, and social changes that happened in the West and East during the same historical periods, we will be able to see how the interplay of global and local hegemonic forces shaped medical practices that we know today. The course would further examine Western and Eastern medical practices by studying the history of medicine and how it developed in colonial Singapore.
**Seminar Participation, Presentations and Discussion:**

- Each group will get the chance to present, chair (leading discussion) and be discussants (asking questions) in turn. This rotation will happen once over the whole semester.

- Each presentation time will be: 60 mins, followed by 20 mins for questions (Q&A).

- The presentation and discussion will be based on the readings assigned by the instructor weekly.

**Individual Research Project (Proposal, Project Progress Presentation and Major Essay)**

Feel free to propose any research idea related to this module for your research proposals and the final major essay. If you are not sure, please talk to your instructor. Please send all the assignments to ivy.hui.yuan.yeh.yapp@gmail.com

Course Policies and Student Responsibilities

(1) General
Students are expected to complete all assigned pre-class readings and activities, attend all seminar classes punctually, and take all scheduled assignments by due dates. Students are expected to take responsibility by following up with course notes, assignments, and course-related announcements for seminar sessions. Students are expected to participate in all seminar discussions and activities.

(2) Absenteeism
The team-based activity of this course requires students to be in class to contribute to teamwork. In-class activities make up a significant portion of student course grade. Absence from class without a valid reason will affect student’s overall course grade. Valid reasons include falling sick supported by a medical certificate and participation in NTU’s approved activities supported by an excuse letter from the relevant bodies. There will be no make-up opportunities for in-class activities. If students miss a seminar session, students must inform their team members and instructor via email (hyyeh@ntu.edu.sg) prior to the start of the class.

(3) Penalties for late submission
There will be penalties for late submission of 10% per day unless there are approved medical or other certificated reasons explaining the delay. Students must ensure that the instructor is aware of these circumstances as soon as possible. Students failing to submit an assignment will be denied their credit points for this course. In exceptional circumstances extensions may be granted for individual students, but only for students who ask BEFORE the essay submission date.

(4) Plagiarism in writing research papers
It is important that all unacknowledged materials in students’ essays are their own work. The University has strict rules relating to plagiarism that may result in disciplinary procedures. Remember that copying or using any part of another student’s essay or written work also falls within the definition of plagiarism. Exact texts cited from other’s works and placed in student’s paper must be put within quotation marks. Otherwise, paraphrase. The sources of both quotations and paraphrasing have to be properly noted.

Academic Integrity
Good academic work depends on honesty and ethical behaviour. The quality of your work as a student relies on adhering to the principles of academic integrity and to the NTU Honour Code, a set of values shared by the whole university community. Truth, Trust and Justice are at the core of NTU’s shared values.

As a student, it is important that you recognize your responsibilities in understanding and applying the principles of academic integrity in all the work you do at NTU. Not knowing what is involved in maintaining academic integrity does not excuse academic dishonesty. You need to actively equip yourself with strategies to avoid all forms of academic dishonesty, including plagiarism, academic fraud, collusion and cheating. If you are uncertain of the definitions of any of these terms, you should go to the academic integrity website for more information. Consult your instructor(s) if you need any clarification about the requirements of academic integrity in the course.
